#### CAUTION:

- Load ratings shown are maximum allowable loads with the crane mounted on an Altec-approved chassis.
- Loaded boom angles at specified boom lengths give only an approximation of the operating radius. The boom angle before loading should be greater to account for deflections. Do not exceed the operating radius for rated loads.
- When between listed lengths for radii, always use the smallest of values shown. Capacities for the 31 ft boom length must only be lifted with boom fully retracted.
- Load ratings are based on freely suspended loads with the crane properly set-up on outriggers, with the machine leveled and standing on firm uniform supporting surface.
- Actual working capacities depend on supporting surfaces, wind and other factors affecting stability such as hazardous surroundings, experience of personnel, and proper handling.
- Weights of load block, stowed jib, or other accessories must be deducted from the rated capacities shown.
